## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

**DETAILED ACTION**

***Response to Amendment***

1. Applicant's amendment filed on April 16, 2009 has been entered. Claims 89-91, 94-96, 98-102, and 104-120 are still pending in this application, with claims 89, 94-95 and 102 being independent. Claims 92-93, 97, and 103 have been cancelled.

***Response to Arguments***

2. Applicant's arguments, see Remarks, filed April 16, 2009, with respect to claims 89, 94-95, and 102 have been fully considered and are persuasive. The rejection of claims 89 and 102 has been withdrawn. The objection to claims 94-95 has been withdrawn.

***Allowable Subject Matter***

3. Claims 89-91, 94-96, 98-102, and 104-120 are allowed.

Regarding **claim 89 and subsequent dependent claims**, Misawa et al (US 5,282,044) disclose a blur correction camera system comprising a vibration detection unit that detects a vibration (column 3, lines 52-57); a blur correction optical system that is driven based upon a detection result of the vibration detection unit to execute a first image blur correction (column 4, lines 1-5); an image capturing unit that captures an image formed with a photographic optical system that includes the blur correction optical system (column 6, lines 46-56); and an image correction unit that executes a second image blur correction through image processing an image captured by the

image capturing unit, based on the detection result of the vibration detection unit (column 4, lines 54-62; column 13, lines 47-65).

However, the prior art does not disclose wherein at least one of a time period information relating to a period of time during which a still image is captured by the image capturing unit and a timing information relating to a timing at which the still image is captured by the image capturing unit is input to the image correction unit, and the image correction unit executes the second image blur correction by using the input of at least one of the time period information and the timing information.

Regarding **claim 94 and subsequent dependent claims**, Misawa et al disclose a blur correction camera system comprising a vibration detection unit that detects a vibration (column 3, lines 52-57); a blur correction optical system that is driven based upon a detection result of the vibration detection unit to execute a first image blur correction (column 4, lines 1-5); an image capturing unit that captures an image formed with a photographic optical system that includes the blur correction optical system (column 6, lines 46-56); and an image correction unit that executes a second image blur correction through image processing an image captured by the image capturing unit, based on the detection result of the vibration detection unit (column 4, lines 54-62; column 13, lines 47-65).

However, the prior art does not disclose an image restoration decision unit that makes a decision as to whether the second image blur correction is to be executed by the image correction unit based on at least one of a focal length of the photographic optical system, a period of time during which a still image is captured by the image

capturing unit, and a blur component remaining even after the first image blur correction is executed.

Regarding **claim 95 and subsequent dependent claims**, Misawa et al disclose a blur correction camera system comprising a vibration detection unit that detects a vibration (column 3, lines 52-57); a blur correction optical system that is driven based upon a detection result of the vibration detection unit to execute a first image blur correction (column 4, lines 1-5); an image capturing unit that captures an image formed with a photographic optical system that includes the blur correction optical system (column 6, lines 46-56); and an image correction unit that executes a second image blur correction through image processing an image captured by the image capturing unit, based on the detection result of the vibration detection unit (column 4, lines 54-62; column 13, lines 47-65).

However, the prior art does not disclose wherein image blur corrected through the second image blur correction is a blur component remaining after the first image blur correction is executed.

Regarding **claim 102 and subsequent dependent claims**, Misawa et al disclose a blur correction method comprising detecting a vibration by a sensor (column 3, lines 52-57); driving a blur correction optical system for executing a first image blur correction based on a vibration detection result obtained by using the sensor (column 4, lines 1-5); capturing an image formed with a photographic optical system that includes the blur correction optical system (column 6, lines 46-56); and executing a second image blur correction through image processing on the image thus captured based on

the vibration detection results obtained by using the sensor (column 4, lines 54-62; column 13, lines 47-65).

However, the prior art does not disclose outputting a first vibration signal and a second vibration signal, which is different from the first vibration signal, by using the sensor; executing the first image blur correction based on the first vibration signal; and executing the second image blur correction based on the second vibration signal.
